

## Ghost Mounts

### AM I GHOST MOUNTING MY AUTOMOUNT ON MY MAC?

So, you get into work and start up your apple computer station. You login and head to the Volumes folder... but there's no Open Drives Share!!! No need to panic, it's most likely just a ghost-mounted volume.

### WHERE'S VO1!!!

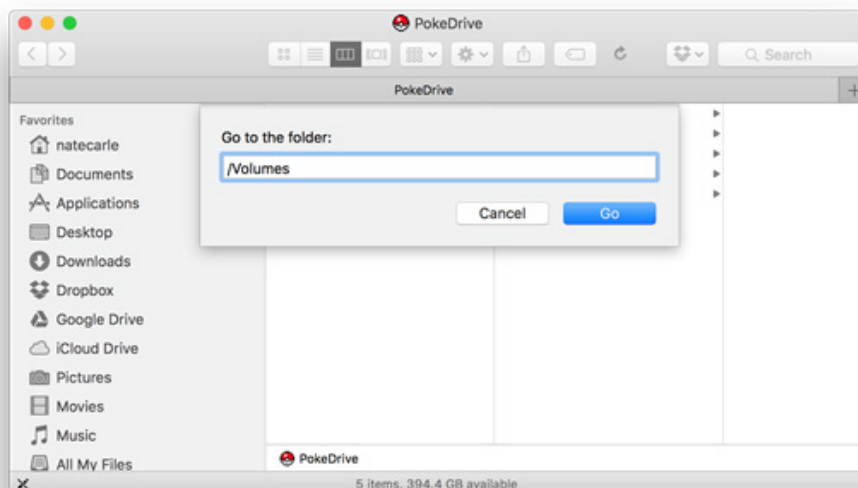

Here are the steps you need to take to fix this...

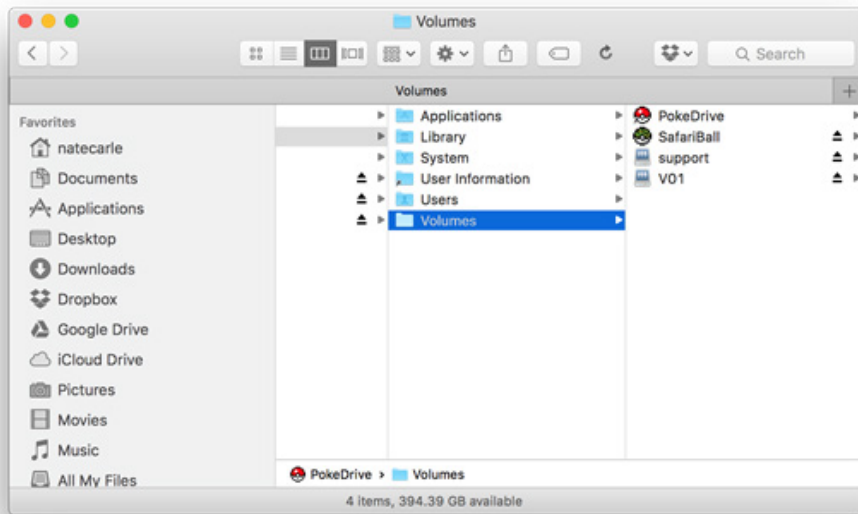

Open a Terminal window and cd to the /Volumes directory on that machine.

Then you will want to run the following command:

ls -al

```
natecarle 03:42:50 1240 /Volumes
🔥 gotta catch 'em all!!! ls -al
total 20
drwxrwxrwt  7 root      admin   230 Mar 24 15:41 .
drwxr-xr-x  35 root      wheel  1250 Mar 22 10:00 ..
-rw-r--r--  1 natecarle admin  6140 Apr 25  2015 .DS_Store
lrwxr-xr-x   1 root      admin    1 Mar 22 10:02 PokeDrive -> /
drwxrwxrwx  10 natecarle staff   600 Mar  7 17:45 SafariBall
drwxrwxrwx   3 root      wheel    3 Jan 25 13:32 V01
drwxrwxrwx  10 $02      owner   21 Mar 24 15:19 support
natecarle 03:42:56 1240 /Volumes
🔥 gotta catch 'em all!!!
```

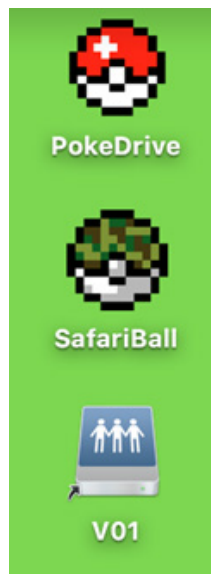

You can make a symlink to the Desktop so you never have to do this again. Use the `ln` command to do this.

```
Terminal — -bash — 109x31
natecarle ~ % getsa catch 'em all!!
natecarle ~ % ln -s /Volumes/V01/ /Users/natecarle/Desktop/
natecarle ~ % getsa catch 'em all!!
```

just substitute natecarle for whatever user you are logged in as, and your share name for V01.

There it is on the desktop now!

Then do a restart and make sure everything looks correct when the machine boots back up.

It's time for a mountain dew. You deserve it.\*\*
